

Amendments to the Specification:

Please replace the paragraph beginning on page 32 at line 8, beginning with the words "Camera pen 1710", with the following rewritten paragraph:

Camera pen 1710 is connected to frame capture 1728 and mouse 1752 and acts as an auxiliary pointing device. Camera pen 1710 transmits image information to frame capture 1728. In one embodiment, button [[1714]] 1711 of camera pen 1710 is wired to mouse 1752 so that when a user presses button [[1714]] 1711 a signal travels through the circuitry of mouse 1752 to cursor control 1714. The signal causes processor 1722 to run a program that directs frame capture 1728 to capture the image from camera pen 1710. In another embodiment, both the image line and signal line from camera pen 1710 are input directly into frame capture 1728. The lines between camera pen 1710 and computer 1712 can be wired in any way that provides capture of the image from camera pen 1710.

Please replace the paragraph beginning on page 32 at line 17, beginning with "The user makes ,,", with the following rewritten paragraph:

The user makes a selection by placing camera pen 1710 on or near visual indicia on glyph address carpet 1732, and pressing button [[1714]] 1711. Pressing button [[1714]] 1711 causes camera pen 1710 to capture the portion of the address carpet 1732 under the tip of camera pen 1710, and transmit the image to computer 1712, via frame capture 1728, for analysis. The button [[1714]] 1711, or multiple buttons, can be used for additional signaling, as in a double click, hold down.
